

TOILET BLOCK

Project: Toilet Block Roof

Category: Waterproofing

Completion

Date: 30 June 2005

System: Rhino Linings TUFF STUFF

Job Description

This public toilet facility was suffering from a leaky roof. The roof was constructed from fibre sheeting and was subject to thermal expansion and contraction making many traditional sealing products unviable.

The local council required a flexible but strong product that would cure quickly to avoid compromising the sealant integrity in the event of inclement weather during or shortly after application.

Rhino Linings TUFF STUFF provided the solution. Being spray applied it conformed to the substrate, sealed intricate joins and overlays, cured instantly and is flexible and strong.
